GOODMAN'S
NURSERIES

BAIRNSDALE
• VICTORIA

Australia

TO ORCHARDISTS

And Intending Planters.

Bairnsdale, 1st March, 1925.

I HAVE much pleasure in presenting my 37th **PRICE LIST**, and avail myself of the opportunity to thank you for the support accorded me during the past years. It is my constant endeavor to merit your favor and recommendation.

SITUATION.—My nurseries are situated under one mile from the Bairnsdale Station, and I have a Private Railway Siding in to my Nursery Packing Shed, which enables me to give very prompt despatch of orders.

INSPECTION.—There is a good railway service (twice daily) between Melbourne and Bairnsdale. I will be pleased at any time to meet intending clients and show them my nurseries, etc.

SOIL.—The soil is particularly favorable for producing nice fibrous-rooted Trees, Stocks and Plants. The season has been a favorable one, and all lines have made a splendid growth.

ASPECT.—My nurseries are in an exposed position, which causes the wood of the young trees to be hard and well matured.

QUALITY.—Every tree is staked, thus ensuring a straight stem, and every tree is properly headed and carries at least three branches.

STOCK.—This season my stock of saleable trees is ample for requirements. Every tree is perfectly clean, healthy, free from insect pests and should give every satisfaction.

THE NURSERIES ARE REGULARLY INSPECTED EACH SEASON PREVIOUS TO SENDING OUT TREES, AND A CLEAN CERTIFICATE CAN BE HAD WITH EACH CONSIGNMENT, IF DESIRED.

PACKING.—All Trees are carefully packed, and every season flattering testimonials are received as to the excellence of the "GOODMAN PACK."

ORDERS.—The prices quoted are for cash on 1st October. Orders can now be booked and despatched at any time after the middle of May, as clients wish. **PRICES HEREIN ARE F.O.B. MELBOURNE, or RAILWAY SIDING, BAIRNSDALE.**

Unknown correspondents are kindly requested to remit with their orders or to name a Melbourne or bank reference.

AGENTS.—We want reliable agents in every district where we are not now represented.

Yours truly,—

C. J. GOODMAN.

HINTS

To Intending Planters.

Careful Planting, Regular Cultivation,
Proper Pruning and Spraying make
for Success in the Life of Every Tree.

TIME TO PLANT.

Deciduous trees can be successfully planted from June to end of August, but in the drier parts the earlier the planting is done the better, whereas in cold, wet situations the late planting gives the best results. Planters in irrigation districts prefer to plant late and secure the help of the first spring watering from the channels.

Citrus Trees and Evergreens, as stated under headings, do best when planted from end of August to middle of October, although good results are also obtained from early planting with first good rains, when the ground is still warm, say in April.

TREATMENT OF TREES ON ARRIVAL

On receipt of trees unpack immediately, and heel them carefully to avoid exposure to the roots. This is done by digging a trench, putting the trees in singly or in small handfuls, covering the roots well with loose soil. If the roots are dry, drench them thoroughly with water before heeling in, but do not let the trees stand in water, as is often done, sometimes even for a few days.

Before planting, examine the roots, and shorten the ends. Don't take too many trees at a time.

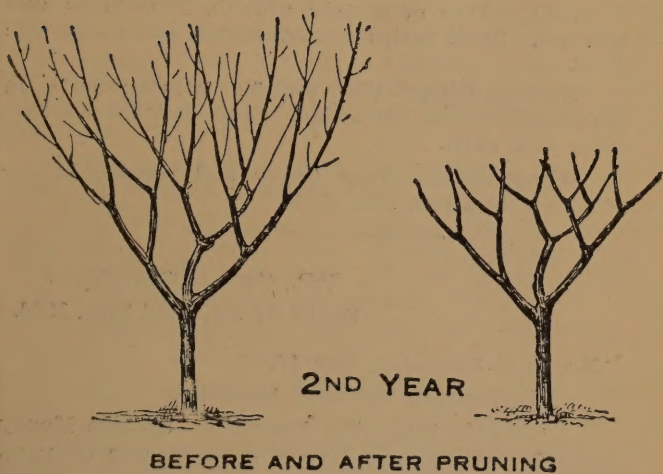

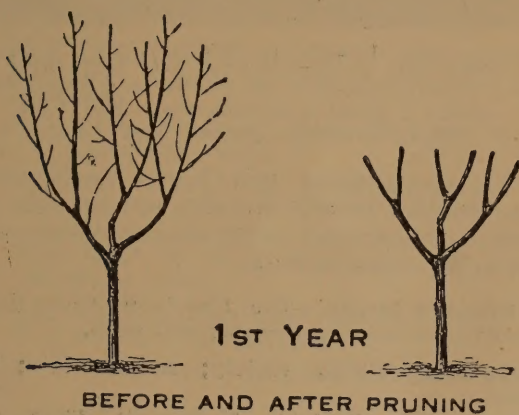

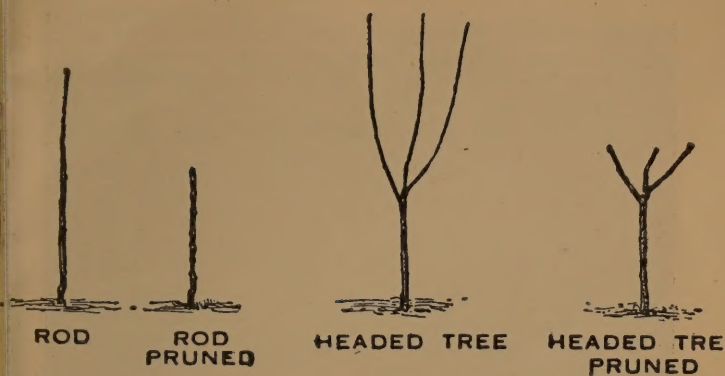

PLANTING.

Where land is thoroughly tilled the tree-holes need be but a little larger than necessary to receive the roots without cramping them; throw the top soil on one side and the lower on the other. In planting, fill in the good top soil round the roots; when these are covered tramp them firmly, then fill in the surface, but leave it light and loose. The method of digging large holes in untilled land and planting trees is a bad one, as holes generally become water-logged and roots decay, causing death of the tree.

Oranges and evergreens benefit, if planted late in the dry weather, by a good watering just as the roots are covered; then when water has soaked in, finish filling the hole, but do not tramp the top soil.

Be sure not to plant deeper than trees stood in Nursery; rather plant on slightly elevated mounds, as after cultivation and ploughing generally raise the soil around the tree.

Having planted the trees, which have, through being lifted from Nursery and roots pruned as above, lost so much of their roots the logical result is remaining roots cannot supply the sap necessary to nourish the growth above ground; hence to ensure success, CUT THE TOPS WELL BACK so as to ultimately form a low-headed, vase shaped tree.

ALMONDS

1/6 each, 15/ per doz., £5 per 100.

The production of Nuts is an industry on the eve of very great expansion in Australia. This photo shows 3 great Almonds, viz., Ne Plus Ultra, Brande's Jordan and I.X.L.

We are confident that future profits derived from first-class Almond orchards will be most satisfactory. Choose good soils, suitable locations and plant at least two varieties.

Brande's Jordan.—The tree is a strong upright grower; nuts large and sweet; soft shell.

Burbank.—Hardy variety; flowers late; hard-shelled.

Papershell (Hatch's Nonpareil).—Tree of a spreading habit, and strong grower. Heavy and regular bearer. Most popular thin shell variety.

I.X.L.—Tree of upright growth. Nuts large and uniform. Shell soft, smooth; kernel large and well filled.

Ne Plus Ultra.—Very prolific, bearing nuts in branches all over the twigs. Long and narrow with thick soft shell.

NONPAREIL.—Very heavy and regular bearer of nuts with a fine, thin shell.

P.O., Cape of Good Hope
South Africa, 22nd Sep., 1924.

Mr. C. J. Goodman, Box 47,

Bairnsdale, Victoria, Australia.

DEAR SIR,—We herewith enclose Money Order in settlement of your account, and shall be glad if you will kindly acknowledge receipt. The trees arrived in excellent condition.—Yours faithfully,

H.E.V.P.

(Page Four)

APPLES

1/6 each, 15/ per doz., £5 per 100. Special rate for 500 or over.

Apples are our most important fruit. Owners of apple land can plant up big areas with leading varieties and rest assured that theirs is a "gilt-edged" investment. In all districts, concentrate on the very few varieties that do best under their local conditions. As a rule, this means in commercial planting three to five sorts.

Alexander.—Very large green and yellow fruit with red streaks. Cooking. Early.

Alfriston.—Large green apple. Keeps and carries well. Cooking. Late.

Cleopatra (New York Pippin).—Medium to large, conical; skin clear yellow, flesh whitish, juicy and rich. Consistent and heavy bearer; grown very largely for export in dry air apple districts. Dessert. Early to medium.

Cox's Orange Pippin.—Medium size, roundish and very even. Partial to climates, but a good dessert. Medium.

Crofton.—Medium size; good color and keeper. Liable to Black Spot. Late.

Delicious.—Its large size, distinctive shape, beautiful color and exquisite quality have combined to make this variety immensely popular. Bears quickly and "sells itself" in all dessert apples. Be sure to plant Delicious. Late.

Dougherty.—Medium sized, almost covered with red. Cool stores well. Medium.

Duke of Clarence.—Dark red and good cropper. Early.

Dunn's (Munroe's Favorite).—Fruit large. Clear waxen yellow with brownish red cheek. Good solid apple very highly esteemed for export. Very prolific and suits warm climates. Late.

Edna May.—Medium to large; good color with red streaks. Crops heavily and stores. Late.

Fameuse (Pomme de Neige).—Heavy bearer of medium-sized white fleshed fruit. Cool stores well. Medium. Dessert.

Glengyle.—A sport from Rome Beauty, but has more red. Liable to revert. Late.

Granny Smith.—Large greenish turning to a beautiful yellow when ripe. Roundish oblong fruit with a hard and juicy flesh. One of the best croppers. Good for storing and export. Late.

Gravenstein.—Large fruit with red stripes. Very valuable for early dessert.

Irish Peach.—Old time variety, tender and sweet. Early.

Jonathan.—Fruit medium in size, but with an attractive red color. Best quality and very productive. Dessert and export. Medium.

King David.—Very dark red, with hard yellowish flesh, ripening just ahead of Jonathan.

APPLES (continued)

DELICIOUS (top) and **TASMA** or **DEMOCRAT** (bottom). Two apples which are now being planted in largely increasing quantities.

London Pippin (Five Crown).—Medium to large, skin light green turning to yellow. A heavy cropper suiting a cool climate and useful for all purposes. Late.

M'Intosh (Red).—Medium to large, roundish. Skin whitish yellow nearly covered with red. Good cropper and keeps well. Late.

Nickajack.—Large, with red streaks. Cooking and dessert. Late.

Northern Spy.—Bears late.. Splendid dessert. Late.

Reinette Du Canada.—Large fruit; cooking and export. Late.

APPLES (continued)

Rokewood.—Very heavy cropper of highly colored fruit which stores well. Flesh very hard. Late.

Rome Beauty.—Large greenish apple with red streaks. Beautiful quality and stores well. Late.

Scarlet Nonpareil.—Grown in parts of Tasmania for late markets. Highly colored. Dessert.

Senator.—Flesh yellowish white. Crops heavily. Dessert. Late.

Statesman.—Medium size. Bright golden shaded with crimson. Strong grower and good cropper. A very profitable variety for storing. Late.

Stayman (Winesap).—Very handsome apple of good quality. Tree is vigorous, bears early and is a regular cropper. Now being sought after by planters. Late.

Sturmer.—Medium sized fruit; skin greenish yellow and brownish red. Flesh firm, crisp and rich. Suits Tasmania. Late.

Stewart's (Seedling).—Large green and yellow fruit with red cheek. First class for cooking and storing. Late.

Tasma (Democrat).—Large fruit, very flat and dark red all over. Heavy bearer; good flavor. Most profitable for late markets and now being extensively planted.

Twenty Ounce.—Large cooking; crops well. Early.

William's Favorite.—Handsome dessert apple. Will not keep. Early.

Wolseley (Lord).—Green skin; first rate cooker. Late.

Worcester Pearmain.—Medium size and well colored. Dessert, good for early export.

Yates.—Very heavy yielder of highly colored fruit. Plant where there is ample moisture in a cool climate and there is no more profitable cool storing variety. Late.

M., August 4, 1924.

Mr. C. J. Goodman, Box 47,
Bairnsdale, Victoria, Australia.

DEAR SIR,—Referring to yours of the 28th ult., the trees advised therein have been received in perfect order. They are a specially fine lot, and we desire to thank you for your very prompt attention to our order. We have pleasure in enclosing cheque.—Yours faithfully,

B. & SON.

(Page Seven)

APRICOTS

1/6 each, 15/ per doz., £5 per 100.

Alsace.—Large and round. Rich flesh. Medium.

Blenheim (Shipley).—Tree vigorous, regular and productive bearer. Flesh deep yellow, rich and juicy. Blenheim is the leading apricot in California and our strain was secured from a reliable grower there. Much sought after by canners everywhere and ripens just after the Oullins is finished.

Campbellfield Seedling.—Fair size and orange color. Medium.

Early Moorpark.—Similar to Moorpark but very irregular cropper and earlier.

Hemskirke.—Large fruit of bright orange color. Hardy variety and very heavy yielder. Medium.

Large Early.—Large and nice flavor, but too shy in bearing.

Mansfield (Seedling).—Large fruit with flat sides. Skin pale yellow with few red dots. Rich flavor. Medium.

Moorpark.—Fruit large; skin yellow with red blush. Excellent flavor and very popular. Medium.

Newcastle (Early).—Heavy bearer of medium to small fruit. The earliest apricot.

Oullin's (Early Peach).—Heavy bearer of large fruit. Popular for dessert. Early.

Rose de Vaucluse.—Prolific cropper. Sovereign yellow fruit, inclined to run small. Medium.

Royal (American).—Not to be confused with the old-time ordinary Royal. Regular in bearing, heavy crops of well-sized fruit which ripens evenly. Dark yellow flesh which is rich and firm. A favorite for canning and drying. Medium.

Tilton.—Large oval fruit having a yellow skin, tinged with red. Flesh deep orange yellow. A remarkably consistent bearer which colors well in advance of ripening. Carries splendidly. Good for market and canning. Late.

Trevatt.—Good large fruit and a wonderfully heavy bearer. Canning and drying. Medium.

APRICOTS ON PLUM STOCKS

Suit planting on wet land and also preferred by some growers against any other stock.

1/6 each, 15/ per doz., £5 per 100.

Blenheim.

Oullins.

Hemskirke.

Tilton

Mansfield

Trevatt

Moorpark

CHERRIES

Worked on genuine Mazzard and Kentish Stocks.

Book at once. Supplies very limited.

2/6 each, 24/ per doz., £6/10/ per 100.

Bedford's Prolific.—Large, handsome and black. Flesh tender, rich and good; heavy bearer and excellent for market. Early to medium.

Bing.—A large black cherry with a delicious flavor. Carries well. Medium.

Burbank.—A dark cherry with a firm flesh. Early to medium.

Burgdorf's (Seedling).—This is a splendid fruit, almost black in color. Prolific cropper of big-sized cherries. Early.

Chapman.—Very fine quality and very early.

Early Lyons.—Very large, dark red almost black when ripe. Flesh firm and popular market variety.

Early Rivers.—Dark red fruit; crops well.

Early Purple Guigne.—A medium sized dark purple fruit which is one of the first ready for market.

Florence.—Large and bright red cherry with a very firm flesh. Good shipping variety. Late.

Knight's Early Black.—Heavy bearer; tender and rich.

Morello (Kentish).—Well-known for cooking and bottling. Late.

Napoleon (Bigarreau).—A magnificent cherry of large size; pale yellow with a bright red cheek. Flesh firm and sweet. First class for dessert and canning. Medium.

Noble.—Dark red with a firm flesh, having a good flavor. Tree hardy, vigorous and prolific. Late.

Royal Ann.—Pale yellow, richly mottled with red; large to extra large; very firm, juicy and sweet; good eating and magnificent for display. A good shipper. Very productive and unequalled for canning. Highly recommended. Medium.

St. Margaret.—Very large black fruit with a firm flesh. Good carrying variety and profitable for late marketing.

Tartarian (Black).—Very large purplish black fruit of delicious flavor. Very profitable. Early.

Twyford (Bigarreau).—Pale yellow and red; first class dessert. Early to medium.

Werder's Early Black.—Tender and juicy flesh with a rich flavor.

Double Flowering Cherries

Laden with blossoms of very large size. A most handsome, ornamental tree.

Price, 3/6 each.

Japanese No. 3.—Semi-double, cream color and splashed with red.

Japanese No. 8.—Large double white flowers on stems fully four inches long with three to seven flowers each. Extra fine and free grower.

Japanese No. 9.—Blush changing to white. Very large blooms.

FIGS

During the last few seasons, it has been clearly demonstrated that a greatly increased production of dried and canned figs can be marketed to good profit. Last year's crop averaged well over £20 per ton.

1/6 each, 15/ per doz., £5 per 100.

Brown Turkey.

White Adriatic.

Large Black Genoa.

White Genoa.

NECTARINES

Worked on Peach Seedling Stocks.

1/6 each, 15/ per doz., £5 per 100.

Early Rivers.—Fruit of largest size, skin rich crimson on side next sun, light yellow, marked with red on shaded side; flesh is tender, juicy, and very rich, with a decided "Stanwick" flavor. Very early.

Goldmine.—The fruit is of an enormous size. It is a perfect freestone, the pit or stone being extremely small for so large a fruit. The flesh is a beautiful cream color, tender, juicy, melting, and sugary, and of most delicious flavor; color bright bronzy red. Season of ripening, early February.

Hunt's Tawny.—Pale orange and deep red. Early.

Mrs Dr. Chisholm.—A very early variety. Ripe in the beginning of December.

New Boy.—Fruit of largest size and extremely handsome, covered all over with brilliant crimson; flesh white, juicy, sugary, and of exquisite flavor. Tree very hardy and profuse cropper. One of the best.

N. Orchard, N.S.

August 2, 1924.

Mr. C. J. Goodman, Box 47,

Bairnsdale, Victoria, Australia.

DEAR SIR,—Your bundle of trees to hand, for which enclosed find cheque as per account. The trees arrived in splendid order, and are a very nice lot quite equal to anything of yours that I've had to do with in the past and am very pleased with them. —Yours faithfully,

R.T., Manager.

G.O., June 27, 1924.

Mr. C. J. Goodman, Box 47,

Bairnsdale, Victoria, Australia.

DEAR SIR,—The trees sent were the finest young trees we have yet had on our place and we have planted over 4000 trees.—Yours faithfully,
W.G.

NEW PEACHES

PALORA CLING ("Peach of Gold")

At a meeting of cannery operators in San Jose (California) in 1919, this fruit first attracted general attention. Each canner submitted a can of peaches with nothing to identify it save the private mark, and then the judging was done by three men all expert in canning peaches. A can of Palora was awarded first place for general qualifications such as color, texture, flavor, etc. An orchard block of Palora yielded eight tons per acre at the age of four years and 11½ tons per acre the following year.

After a good deal of trouble and expense I succeeded in securing some trees of this great peach.

Palora fruited this season at Leeton, Shepparton and in my own orchard. From the grower's standpoint it is "just the thing," whilst the whole of the leading canners in Victoria and N.S.W. to whom samples were sent, give Palora very high praise indeed for its canning qualities.

Palora ripens 25 days ahead of Phillips. It is a golden yellow with a slight blush of red. The tree is a sturdy grower. Fruit carries well and can be recommended from all points. The grower who plants Palora will find it the "Peach of Gold," in profit, as well as appearance.

Very limited supply of trees for 1925 planting. BOOK EARLY.

Peak Cling.—A fine, large, yellow cling, clear yellow to the pit which is small and round with no spike. Flesh of firm texture, fine grained and excellent quality. Very productive and ripens before the Sims and Phillips.

Selma Cling.—Fruit is a beautiful golden yellow, skin slightly colored when exposed to the sun. Somewhat flattened; flesh clear yellow to the pit; is fine grained and of excellent flavor. Pit very small. A most wonderful peach for canning. The syrup is left clear, there being no rag of the flesh at all. The Selma ripens between the Tuscan and Phillips' rendering it in high demand by canners.

PEACHES

All worked on Peach Seedling Stocks.

1/6 each, 15/ per doz., £5 per 100.

Special rate for 500 or over.

Having Peach Orchards of our own, also a Cannery, our expert advice is willingly given at any time.

Yearling Clingstone Peaches. An extra fine lot of 30,000 Levis, Goodman's Choice, Sims, Pullar's, Palora, Phillips, Golden Queen, Peak, Selma and Tuscan.

Alexander's Early.—Highly colored and of fine quality.

Bell's November (Dunhelm).—A good bearer and extremely early. Very partial to districts—a favorite in West Australia.

Brigg's Red May.—Red skin, white flesh, rich and juicy. Early.

Elberta.—Large, handsome yellow freestone. A splendid bearer, and carries well. Good for dessert and drying. Medium.

Foster.—Good sized yellow fleshed freestone, with orange-red skin. Same season as Early Crawford.

Goodman's Choice.—Medium sized fruit, heavy and regular bearer. There is no yellow flesh Cling Peach in existence that can compare with Goodman's Choice for appearance, flavor and delicacy of texture. Exceedingly choice when canned. Ripens end of February.

Golden Queen.—A very fine yellow Clingstone; clear yellow to the pit. Crops well, and the fruit is even in size, giving a nice grade throughout. Small, smooth stone. A favorite with canners. Ripens beginning of March.

Hale's Early.—A large, white fleshed freestone, with bright red skin. Heavy cropper; finest dessert quality, and very profitable. Ripens after Brigg's and High's.

High's Early Canada.—A first-class white-fleshed freestone, with red skin. Crops well, and is good for market. Now much preferred to Brigg's Red May for bearing and a good money maker.

PEACHES (continued)

Kia Ora.—Similar to Elberta, but tree is hardier, and fruit better quality. Medium.

Lady Palmerston.—Medium sized yellow fleshed freestone. Drying and late market.

Levis Cling.—A perfect yellow cling to the pit. Ripens 18th to 24th January.

Louis Grognet.—Fruit very large; skin cream color, with dark red cheek, often marbled with red; flesh white, very melting and juicy; ripens just after Hale's Early. The tree is a good, strong grower, and bears heavily. This is a variety no market grower should be without, as it is undoubtedly the finest of its season, and will sell anywhere.

Lovell.—A large, round, yellow freestone. Not a trace of red at stone. Dries very well. Medium.

Mayflower.—Resembles Brigg's Red May, but three weeks earlier. Medium size with an attractive carmine coloring. Carries well and now sought after for early dessert.

Muir.—Large yellow freestone that crops well and dries satisfactorily. Late.

Phillips' Cling.—A fine large yellow cling; clear yellow to the pit, which is very small; flesh fine grained. Tree thrifty and regularly productive. Preferred by Canners to any other late variety Cling. Ripens end of February.

Note.—We propagate our Phillips' Cling from a block of old trees of this variety that have an excellent record for productiveness and quality of fruit.

Pullar's Cling.—Raised by P. Pullar, of Ardmorna. Heavy yielder, but stone large and red. Ripens second week in March.

Royal George (Slip).—Medium to large; flesh tender, melting and rich. Medium.

Salway.—Deep yellow freestone. Large. Late.

Sims' Cling.—Large yellow fleshed fruit and almost perfectly round; fine texture and clear yellow to the pit or stone, which is very small. Ripens just ahead of Phillips', and is looked upon as one of the best for canners. Medium.

Sneed.—A freestone of indifferent quality. Very early.

Triumph.—Above medium size; skin dark orange yellow; covered with dark carmine; flesh yellow and juicy; heavy cropper. The best early yellow fleshed variety; ripening with Alexander's Early.

Tuscan Cling.—Very large and rich yellow fruit; vigorous grower; sought after by canners owing to its quality and earliness. Ripens from 12th to the 15th of January. The earliest yellow Clingstone for commercial production. As a bearer the tree cannot be excelled, but special pruning is necessary.

Wiggins.—A large-sized freestone with good color. Ripens after Brigg's, and is good for market. Medium.

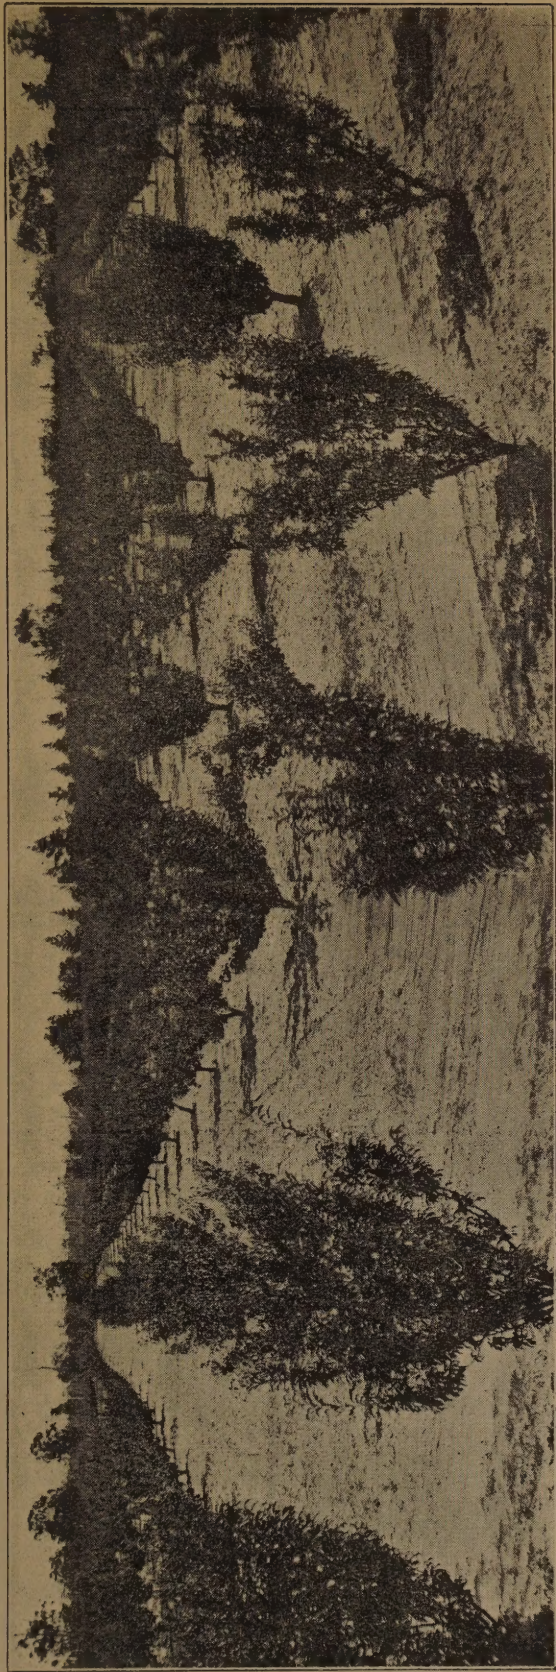

Double Flowering Peaches

These are first-class Ornaments in the Spring time, being a mass of blooms and very showy.

Price: 2/ each.

Double Blood Red

Double White.

A young apple orchard showing the result of care in the selection of trees and afterwards in cultivation and pruning.

PEARS

Though not the quickest tree to come into bearing, the life of a pear tree is remarkably long. It is a fruit that does well in almost any soil, but prefers a heavy loam. It should be planted on land that is too heavy and deep for all other deciduous fruits except quinces and plums. Select a few kinds and specialise on them.

Worked on Pear Seedling Stocks.

1/6 each, 15/ per doz., £5 per 100. Special price for 500 or over.

Bartlett (William Bon Chretien).—The most popular pear grown. Originated in England in 1770, but named Bartlett in America. This pear is so well known it hardly needs a description. Matures perfectly when picked green. Fruit is large and oblong; skin very thin and smooth, clear golden yellow (with a soft blush on the sunny side in exposed specimens). Flesh white and fine grained; full of juice, sweet and with a highly perfumed vinous flavor. Supreme for canning and dessert. Early.

Beurre Bosc.—Large, beautiful russet sort; long neck; melting rich flavor; very productive. Fully the equal in eating quality of Bartlett. One of the most regularly and heavily productive of Pears. A splendid fruit, used largely in export trade. Should be more largely planted.

Beurre Clairgeau.—Large and handsome pear. Tree very hardy; very prolific, and a regular bearer. Profitable for export; stores well. Medium.

Beurre D'Anjou.—Large, pyriform; skin is greenish, sprinkled with russet, sometimes shaded with full crimson; flesh white, melting, juicy and of the finest flavor. In many localities more regularly productive than the Comice. Late.

Beurre Capiaumont.—Medium size, and very even outline. Tree remarkably prolific, and fruit is very handsome. Good for Sydney market. Medium.

Broompark.—Medium to large fruit. Stores well, and found profitable for Queensland selling. Late.

Clapp's Favorite.—Medium to large; yellow with crimson cheek; flesh melting and buttery; dessert. Early.

Dr. Jules Guyot.—Nice medium size; dessert; early.

Doyenne Du Comice.—Large and juicy pear of a good flavor; good for export. Medium.

Duchesse d'Angouleme.—Large and buttery; sometimes melting. Medium.

Easter Beurre.—Very large and somewhat square in shape; a pear which will keep for months. Late.

Fertility.—Large and good color; crops heavily. Early to medium.

Gansell's Bergamotte.—Not a good bearer; dessert, medium.

Glou Morceau.—Large pear, with yellow skin; flesh buttery, melting and very juicy; grand dessert and good for market or late export.

Howell.—Large fruit with a waxen yellow skin; a heavy bearer and comes in just after William Bon Chretien. Medium.

Josephine de Malines.—Medium size, roundish oblate; skin greenish yellow; flesh juicy, melting and highly flavored; keeps very late, and has always commanded highest prices on the market. Ships well.

Chas. J. Goodman.

OCCUPATION.....

We exercise the greatest care to keep our varieties pure and true to name and hold ourselves in readiness at all times, on proper proof, to replace all stock that may prove otherwise or refund the amount paid, but it is mutually agreed between the purchaser and ourselves that we shall not be at any time liable for any amount greater than the original price.

PEAR BEURRE BOSC carrying excellent crop and showing robust growth.

Jargonelle.—Old time variety, poor quality. early.

Kieffer.—Large and round; skin rich golden yellow, sprinkled with small dots. Has a flavor all of its own. Tree strong grower and very prolific if interplanted with "Clairgeau" or "Howell." Stores well. Realises good prices in Brisbane and other Northern markets. Late.

Packham's Triumph.—Raised by Mr. Packham, of Molong, N.S.W.; a pear of good shape, large, and perfect in flavor; a good grower, early and prolific bearer; good for shipping and storing. Late.

Vicar of Winkfield (Napoleon).—Large, long pear; green turning to yellowish green when ripe; heavy cropper and juicy; late market and export.

Wilder.—Fruit medium, bell shaped and pale yellow; flesh whitish yellow. Very early.

Winter Bartlett.—Good size. Late.

Winter Cole.—Medium size, skin green, turning to pale yellow and russet. Flesh is melting, exceedingly rich and juicy. Good for export and storing. Late.

Winter Nelis.—Medium, roundish, oblate; yellowish green dotted with gray russet, and a good deal covered with russet; flesh is yellowish white; fine grained, but watery, very melting and full of rich, sweet, aromatic juice. In eating quality equal to the Bartlett. We propagate from a strain of Winter Nelis producing exceptionally large fruit. Excellent for export and the best winter dessert pear.

PLUMS

1/6 each, 15/ per doz., £5 per 100. Special price for 500 or over.

Plum and Prune Section of Nurseries. Every tree well branched and straight in the barrel.

Angelina Burdett.—Fruit above medium size and roundish; dark purple, rich, juicy and good for market; trees bear heavily and the fruit can be despatched long distances. Early.

Clyman.—Bluish color. Good flavor; very early.

Coe's Golden Drop.—Large, oval. Yellow, juicy, rich and excellent for drying, factory use and desert. Carries well. Late.

Damson Crittenden.—Large and great cropper. Late.

Damson Kneesham.—A dark plum, good for jam. Early and heavy bearer.

Diamond.—Fruit very large, oval; skin black covered with a blue bloom; heavy bearer of yellow fleshed fruit; good for market and jam. Medium.

Early Orleans.—Medium size, roundish oval; skin dark red, purple in the sun; good for market and excellent for dessert and jam. Early.

Grand Duke.—Fruit large, oval, deep purple; flesh yellow and firm; rich and juicy; very prolific; ships well; excellent variety. Late.

Green Gage.—Fruit medium size, round; skin greenish-yellow when fully ripe; one of the best flavored dessert plums. Medium.

Jefferson.—Fruit largest size, oval; skin yellow with a reddish cheek on the sunny side; highly flavored and juicy; excellent quality for dessert and canning. Medium.

Magnum Bonum Yellow (also known as **Egg Plum**).—Large oval yellow plum; regular and heavy bearer; one of the best for cooking and preserving. Late.

Ponds Seedling.—Fruit very large and oval; skin nearly covered with bright red or carmine; flesh yellow, juicy and sugary; beautiful plum for market and jam. Medium.

PLUMS (continued)

President.—Very large, oval; deep purple with a blue bloom; sweet and rich flesh; crops heavily, and is excellent for the market. Probably the best carrying plum and highly profitable. Late.

Red Cherry.—A well-known plum, profitable hedge or breakwind. Early.

Yellow Cherry Plum.—Similar to Red Cherry, except color is yellow.

PRUNES

Same price as Plums.

D'Agen (South Australian type).—Medium to large fruit, oval shape; purple, rich, sweet and sugary; very productive and the standard variety for drying; good for dessert and jam; planted more than all other varieties put together. Medium.

Fellemborg (Italian).—Medium to large, oval; dark purple; good Prune. Late.

Goulbourn Valley French Prune.—A variety well known around Ardmona; medium size and heavy bearer. Tart in taste until three days before fully ripe. Medium.

Giant.—Very big fruit, but not suitable for drying; good for market and shipping. Late.

Golden.—Golden colored; late.

Robe de Sargeant (identical with Prune d'Ente). Very large, deep purple prune; sugary, rich and delicious; a heavy cropper and strong grower; one of the most profitable prunes known; plant with d'Agen or Splendour. Medium.

Silver.—Large and productive. Late.

Splendour.—Exceedingly prolific. Medium.

Sugar.—Fruit large, even in size, rich and sugary, strong grower and prolific. Early.

Tragedy.—Not a true prune, but good for early market.

JAPANESE PLUMS

3/6 each, 15/ per doz., £5 per 100. Special price for 500 or over.

Apple.—Fruit large, roundish and of the blood class, like Satsuma; delicious flavor. Early.

Ballena.—A very large and early plum with crimson color; flesh firm and pale yellow; strong and handsome grower; crops well. Can be sent long distance to market. Early.

Beauty.—A new variety that planters would be well advised to test. Fruit medium, large, heart shaped; skin red and flesh yellow. Very early.

Botan (Abundance).—Large amber and cherry color. Very early.

Burbank.—Medium size, cherry-red color with a lilac bloom; very sweet, and most delicious flavor; good grower and an enormous cropper. Medium.

Climax.—Large heart-shaped; very highly colored, juicy and luscious; fine perfume. Extra early.

Delaware.—A blood plum of the Satsuma type but three weeks later. Very rich bloom on the skin. Remarkably prolific.

Formosa.—Very large, heart shaped. Color bright cherry red, flesh is yellow and of good flavor. Plant with Wickson, Burbank, or Santa Rosa. Very early.

JAPANESE PLUMS (continued)

Kelsey.—A very large, yellow and bright red Plum; very small stone, juicy and rich; heavy bearer, carries well. Late.

October Purple.—Fruit very large; heart shaped, flesh amber color, red beneath the skin, firm and juicy, clingstone. Late.

Santa Rosa.—The best Japanese plum yet introduced. Fruit very large, purplish-crimson with pale blue bloom; tree is a strong, vigorous, upright grower; heavy bearer. Always brings top prices. Very early.

Satsuma (Blood Plum).—Fruit large, round, dark red to the stone which is small. Medium. Plant with Burbank for cross fertilisation.

Shiro.—Medium fruit of uniform size; clear light yellow with white bloom; clingstone; enormous cropper; may be picked weeks before it is ripe. Early.

Wickson.—Fruit very large, beautiful carmine with white bloom; very small stone; firm, sweet and most delicious; will keep for some time after ripening; sturdy grower and most productive. Medium.

Wilson.—Ripens end of November; round; good size; highly colored. Slipstone.

Wright's Early.—Fruit resembles Burbank in shape and size, but much earlier; enormous bearer. Grows uneven sized fruit.

QUINCES

1/6 each, 15/ per doz., £5 per 100.

Apple-Shaped (Orange or Lemon)—Medium size, juicy and very nice for culinary purposes. Productive.

Champion.—Very large uniform fruit of excellent flavor; bears heavily when young. Early.

Missouri Mammoth.—Extra large fruit of even shape; smooth skin and excellent flavor; sturdy grower and prolific. Early.

Pineapple.—Medium size, good for jelly and cooking; nice flavor. Medium.

Smyrna.—Strong and rapid grower; very prolific and commences to bear early; lovely lemon-yellow skin; flesh is tender and delicious, keeps well. Late.

Van Deman.—Heavy and constant bearer; most superior flavor and quality. Medium.

JAPANESE PERSIMMONS

2/6 each, 24/ per dozen.

The fruit of the Japanese Persimmon, when perfectly ripe, is quite luscious. It is best if kept for a time after being packed.

Dai Dai Maru.—Fruit of largest size; almost seedless. Early.

Hyakumo.—Very large.

Kuro Kumo.—Medium size; ripens on the tree.

Seedless.—A first-class variety; large and good color.

Yemon.—Large, tomato-shaped; skin light yellow; almost seedless.

CITRUS

LEMONS, MANDARINS, ORANGES, ETC., ETC.

3/6 each, 30/ per doz., £6 per 100.

Lemon, Eureka (Sweet Rind).—Very like the Lisbon, but the tree is almost thornless; large, good crop in summer. Considered an improved Lisbon.

Lemon, Lisbon.—A well known variety, and probably the best of all.

Lemon, Villa Franca.—Good summer crop. Very juicy.

Mandarin, Beauty of Glen Retreat.—Very handsome; good flavor and productive.

Mandarin, Emperor.—The largest mandarin; very juicy; good for market.

Mandarin, Scarlet.—Large and scarlet; flavor not the best; handsome and productive.

Mandarin Thorny.—Medium size and quite flat with high flavor.

Orange, Blood (Maltese).—Medium size; strong grower, very juicy; and comes in early.

Orange, Joppa.—Large fruit with a thin skin; juicy, rich and sugary; constant and early bearer of fruit that keeps well.

Orange, Mediterranean Sweet.—Nice flavored orange that bears heavily and quickly; ripens late.

Orange Paramatta.—Large and juicy, good for market.

Orange, Seville.—Good for preserving.

Orange, St. Michael.—Fruit of largest size, roundish; skin deep yellow, smooth and thin; carries well and good for market.

Orange, the Queen.—Large, thin skinned; nicely flavored; a heavy bearer.

Orange, Washington Navel.—A splendid orange; fruit very large, very even, perfect shape and color, pulp fine grained and remarkably juicy; rich and racy flavor.

Orange, Valencia Late.—Fruit large, firm and solid; pulp has a high, rich flavor; one of the best oranges grown. Very late.

Grape Fruit, Marsh's Seedless.—This fruit is becoming very popular, partly on account of its medicinal properties. The fruit of this Pomelo is of medium size, thin rind, with about half the usual bitter; practically seedless; pulp juicy; very little rag, and of superior flavor; keeps and packs well; an acquisition in every way.

Lime, Tahitian.—A strong grower and heavy cropper; highly recommended.

Shaddock, Blood.—Very large, sweet juice, excellent for preserving.

ACCLIMATISED ORANGES, LEMONS, Etc.

Balled 4/ to 5/ each. Special reduction for quantity.

These trees are lifted with a ball of earth enclosing the roots, and planters have the satisfaction of knowing that with ordinary care every tree will grow.

Acclimatized Orange and Lemon Trees. Note the ball of earth on roots tied in the hessian wrapper.

RASPBERRIES

2/ per dozen; 10/ per 100.

Cuthbert (Queen of the Market.)	Northumberland Fil-basket
Northumberland Fil-basket, thornless.	Red Antwerp.

WALNUTS

The demand for Walnuts is increasing rapidly, and huge quantities are imported into Australia to meet requirements year by year. Now that Walnut trees are available in varieties, bearing when four to six years old, there is nothing to equal this line as a moneymaker.

Walnut orchards are returning their fortunate owners just on £100 per acre annually.

English (Common).—Well known variety. 18/ per dozen.

English (Papershell).—A type which bears nuts in clusters. Nuts having thin shell, which can be easily crushed between one's fingers. Kernels large, white, and of beautiful flavor. 18/ per dozen.

Franquette.—Originated in France. Tree is strong and prolific. Nuts large, long and smooth. Shell of medium thickness. Kernel plump, sweet, and very rich. 24/ per dozen.

Mayette.—Also from France. Tree blooms late, and is a heavy bearer. Large nuts, with a light colored and soft shell. Should be planted with Franquette. 24/ per dozen.

FILBERTS

2/ each; 18/ per dozen.

Webb's Prize Cobb.

Webb's Prize Exhibition.

Webb's Prize Daviana.

Webb's Prize Red-skinned.

SPANISH CHESTNUTS

A large tree which crops well. 2/ each. 18/ doz.

RHUBARB

I can supply the following varieties, all at 9/ per doz.

Early Albert.—Medium size and very hardy. The very best early kind.

Topp's Winter.—Great bearer; fine flavor; bears well when no other variety is fit to pull.

Ruby Red.—Stout stalks, with a bright red color from end to end; good flavor. Yields two crops, one early and one late.

STRAWBERRIES

Ettersburgh.—Introduced from America. The berry is firm, and carries well; not large; good for jam or preserving. 5/ per 100.

Melba.—Fruit large, brilliant red, and of best flavor; bears from September to May in moist land; the most popular Strawberry. 5/ per 100; 30/ per 1000.

Sunbeam.—Strong grower; fruit large and well colored; crops well. 5/ per 100; 30/ per 1000.

MULBERRIES

Black, English.—A well known variety; best of all. 30/ per doz.; 3/ each.

MISCELLANEOUS FRUITS, etc.

Japanese Wineberry, 1/6 each.—Raspberry shaped fruit; very sweet and juicy; good grower and very ornamental.

Loganberry, 9/ per doz.—Very large fruit and color similar to dark red Raspberry; popular for desert and jam. Plant 6 x 4 feet for commercial purposes.

Special Quotes for Quantities.

Guava (Psidium Cattle yanum).—1/6 each.

Passion Fruit (Passiflora Edulis). 9/ per doz.—This is a most profitable fruit to grow in suitable localities. Special quotes for quantities.

Pomegranate (Punica Granatum). 1/ each, 9/ per doz.

Lóquat, Californian Advance. 2/6 ech.

Loquat, Early Golden. 1/6 each.

Loquat, Herd's Mammoth. 1/6 each.

Loquat, Thame's Prize. 1/6 each.

Ornamental Trees

Cootamundra Wattle.—Glorious blossoms. 12/ per doz.

Elm Canadian.—A good tree of rapid growth. 3/ each.

Elm Chichester.—Large, broad leaved; upright grower. 3/ each.

Elm English.—One of the best, though slow grower at first. 3/ each.

Oak English.—A well known variety. 2/ each.

Oriental Plane.—A well known tree for street planting. Does well anywhere. 3/ each.

Pinus Insignis.—A well known Pine and one of the best trees to plant for shelter. Every tree sent out by us is well "balled" the root being left in the moist soil as lifted and tied in hessian bagging. The tree, therefore, reaches you in perfect order for planting. 12/ per doz.

Pepper Trees.—Good shelter trees that thrive in almost any climate; supplied in pots. 12/ per doz.

Sugar Gums.—Suitable for any climate, and largely planted in the northern parts of Victoria. 9/ per doz.; 60/ per 100.

Cupressus Lambertiana Horizontalis.—This is a beautiful Cypress hedge, an d excellent for hedges and breakwinds. 30/ per doz.

FLOWERING GUMS

It is only of recent years that the true beauty worth of these native Australian trees have been recognised. Being available in different shades of color, they make excellent ornamentals and are also first class for park or avenue purposes.

Any color 1/6 each, 15/ per doz.

ASPARAGUS ROOTS

Conover's Colossal.—Strong yearling roots raised from selected seed, and ready to be planted out this season. 5/ per 100.

B.E., 16/6/24.

Mr. C. J. Goodman, Box 47,
Bairnsdale, Victoria, Australia.

DEAR SIR,—Your parcel of Fruit Trees to hand to-day, and I may say that I have never seen a better lot of trees. I am very well pleased with them. I am only sorry that I did not see your advertisement before I got the trees last year, or I would have given you the order for them. Wishing you every success.—Yours faithfully,

J.R.

RULE, SQUARE METHOD.—Multiply the distance in feet between the rows by the distance the plants are apart in the rows, and the product will be the number of square feet for each plant or hill; which divided into the number of feet in an acre (43,650), will give the number of plants or trees to the acre.

RULE, EQUILATERAL METHOD.—Divide the number required to the acre "square method" by the decimal 886. The result will be the number to the acre by this method.

DEPARTMENT OF AGRICULTURE. VICTORIA.

Vegetation Diseases Act 1896.

I HEREBY CERTIFY that the undermentioned trees and plants in the Nursery, the property of Mr. C. J. Goodman, of Picnic Point, Bairnsdale, have this day been examined and found clean and free from disease. This certificate is granted for a period of Six months from date hereof, unless rescinded upon further examination, in accordance with Clause 3 of the General Regulation under the above Act.

Dated this 13th and 14th day of January, 1925.

LUCIEN PILLOUD, Inspector.
